

How to install dependency modules

It is necessary to install dependency modules made by Prestashop to get access to external applications. They manage your account and subscriptions.

This short guide is about how you can install or upgrade them manually.

Download zip from the suggested sources. Then install the module in the usual way:

<https://classydevs.com/prestashop-install-module/>

PrestaShop Account (ps_account)

Download links (choose any):

<https://addons.prestashop.com/en/administrative-tools/49648-prestashop-account.html>

https://github.com/PrestaShopCorp/ps_accounts/releases/ (install only latest version, not beta or pre-release)

PrestaShop Marketplace in your Back Office (ps_mbo)

Download links (choose any):

<https://addons.prestashop.com/en/administrative-tools/39574-prestashop-marketplace-in-your-back-office.html>

https://github.com/PrestaShopCorp/ps_mbo/releases/ (install only latest version, not beta or pre-release)

PrestaShop EventBus (ps_eventbus)

Install it only if you module requires it.

https://github.com/PrestaShopCorp/ps_eventbus/releases (install only latest version, not beta or pre-release)
